

HOW TO DO THE GOOD SIGNATURE

- 1** There should be no space b\w the initials and the name.
- 2** there should be no dots or lines below the signature
- 3** should not lift there fingers while putting there signature
- 4** They should write all the names continuously.
- 5** Anticlockwise movement should be avoided eighther at the beginning or through the signature.similiarly a downward slant should be avoided.
- 6** A signature that extends horizontally does not indicate progress life will have its own up and downs and with medium result. This signature indicates moderate life.
- 7** When the signature is given a changed form, there will be changes in the body and mind almost immediately.
- 8** The slanting down signature indicates ill reputation, legal disputes, imprisonment, mental affliction, family problems and stagnant business. Many such problems that beset a person will ultimately push him down the drain. He will have no chance of moving up words in life.
- 9** Signatures that slant upwards while give on upwards swing to the person. Every effort will be crowned with success. The mind will become full with contentment, one will come to have strong mind that could achieve any thing on earth.
- 10** The length of signature should not exceed **6CM**; a longer signature will lose its life force and will subsequently lose. Its mesmerizing effect also. Similarly too short a signature will be short of mesmerizing effect of signature. Therefore it should not be of a length less than **3 CM**.

When the signature is devised in accordance with matching standards b\w letter with the powers of a charm and its number such signature will definitely bring success in life. So those contact your nearest signature therapalogist.

Signature therapalogist.

Both the handwriting and signature are very slow in a way that seems almost unreasonable. The writing and the signature are more drawn or painted rather than written and express a personality that is full of anxieties on one hand, yet the writer has a strong drive to prove himself on the other hand.

This creates a conflict that makes it very difficult for the writer to deal with reality. It creates a very frustrated man with difficulty to feel content from his achievements and a need for constant attention.

The size of the signature indicates a megalomaniac tendency. This is partly demonstrated in the signature, which is comprised of two circles, black and white. His drive for attention is greatly noticed and can take a positive or negative form. As long as he is noticed, he feels a temporary relief from his seeded and tremendous urge to prove himself.

He is protective and at the same time domineering with a strong need to rule. He constantly fears others taking over his place and as a result he keeps his guard and is continuously under a great deal of pressure.

He is very prudent, fears failure and avoids risks. Lacking improvising skills, he carefully calculates his steps and tries to avoid uncertain situations.

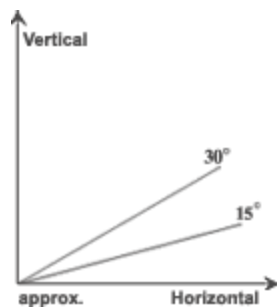

He aspires for perfection at what he does and is often obsessive about his unwillingness to accept any form of mediocrity.

Every action he takes is carefully examined and he advances only after every detail has been meticulously planned and taken into account. This significantly slows down his activity, but at the same time, makes his actions thorough and prudent.

His personality expresses a double standard, as if he is two individuals. This can also be seen in the signature, which shows two circles: black and white. In actuality, the writer is an individual without gray areas, agility or compromises.

The Signature unveils a personality that is analytical and clear. A balanced mind that has an uncanny abil

Illegible signature belong to the economically sound ones especially business magnet and successful industrialists. To avoid major problems never underscore or place dots under your illegible signatures. 80% of those who had a naming underscore continuously to left and then turning right (as illustrated) will give bad events in their personal life and their business.

**Never sign at angle 15' (or)
30' right up.**

According to the changes that happen in a person's life his/her signature changes. For example:

WORLD TOP V.I.P'S PHOTO WITH SIGNATURE

BILL CLINTON

Bill Clinton
Bill Clinton

CHARLIE CHAPLIN

Charlie Chaplin
(Charlie Chaplin)

BILL GATES

Bill Gates
(Bill Gates)

RAJINIKANTH

[Handwritten signature in Tamil]
ராஜினிகாந்த்
தமிழ்நாடு முன்னாள் முதல்வர்
திரைப்பட நடிகர்

JAYALALITHA

1. What does handwriting and signature analysis tell us?

Graphology is the art of assessing a person's character & nature and then extrapolating these details to indicate the various parameters of his life relating to :

- **business**
- **life**
- **finance**
- **family & relationships**

This is entirely a new art & is gaining rapid popularity in India. It is also useful in business as it helps to highlight the character, nature of employees & business associates on various parameters like

- **Loyalty integrity**
- **Honesty**
- **Work drives etc.**

It would be of interest to know that handwriting **helps to indicate more complex and intriguing problems and also helps solve them**. Were you ever worried with any of these questions?

Business:

- **Should I get into a joint venture or Partnership with this person?**
- **Is my business partner taking me for a ride?**
- **My net worth is very high. Still I suffer from a liquidity crunch. Why?**
- **Is my Marketing Manager giving out trade secrets?**
- **Whom should I hire among the crowd of new applicants?**
- **Which employee is most likely to engage in anti corporate activities and could also backstab me?**
- **Who should be promoted in order for the organization to grow?**
- **Is my financial controller siphoning away cash?**
- **Will this person ever pay me back?**

- **My file is lying with an influential personality. Is he holding it back on merits or does he want me to grease his palm?**

Family

- **There is no serious problem with my spouse but then there exists a severe lack of understanding?**
- **Will there ever be mental peace for me at least from the family side?**
- **Why am I not able to get along with my children?**
- **How do I control my temper?**
- **Will my children be able to manage business or make a career for themselves?**
- **Is my joint family due for a bitter break up? Who will start the painful disintegration process? How do I tackle him?**
- **Is my spouse having or is likely to have an extra marital affair?**

On the basis of personal experience research and logic graphology can be described as a skill that has benefited and proven its high degree of accuracy, efficiency in problem solving, compatibility analysis for marriage and a number of events. **For those who need further evidence, feel free to engage my services!**

2. Is graphology scientific?

Yes. Handwriting is also known as "**brain writing**"--**the brain directs the act of writing**. In cases where disability prevents use of the hands, a person may hold the pen in his teeth or between his toes. Research studies have proved that he unconsciously produces the same writing that he would if he could use his hands. After all **it is the brain that helps us write, the hands are only a medium of implementation**.

The accuracy is directly proportional to the skill and talent of the graphologist it takes at least 8 years of study and experience to excel in this art. It is like clinical psychology. No psychology test works out 100% accurately graphology fares very well in being 94% accurate. **In the US and Europe they have recognized universities undertaking graphological studies** but in India there is no institute of such grade or magnitude.

3. Is it true that Graphology is used in United States and Europe for personal selection?

You would be surprised to know that it is very common in France. "**80% of European Corporations use it for employee screening and hiring the best talent for a job**"- **Wall Street Journal September 03, 1985**.

Companies like General Electric, International Harvester, US Steel, Firestone Tire Company and over 3000 other United States Companies have used graphology for personal selection.

4. My handwriting changes all the time. Can you analyze people like me?

Yes. Generally the basic character and the analysis would remain the same. Of course a change in handwriting is caused by a change in moods of persons, we react differently to new situations. These changes are reflected in writing size, uppercase letter sizes, slant, spacing between words and letters and more importantly rhythm.

5. Can you tell if I try and fake my handwriting?

You may fake a couple of lines but then you would not be able to keep it up while writing on a full sheet of paper. Handwriting comprises of a number of elements like slant, pressure, rhythm, zones. It is impossible to fake all these aspects. Even experienced graphologists like me cannot do this.

6. Is it more or less same as astrology?

Unlike astrology you need not have to find the date, place and time of birth of a person. There is no need for a horoscope as I analyze on the basis of signature and handwriting, which can be acquired easily. This makes the science such a big hit with the corporate of Europe and US. It is very unique to astrology. Here there is nothing called the active hand of God. The arrangement of the heavenly bodies are absolutely immaterial. **The most important aspect is that two people in the world cannot be enjoying the same level of living although being born at the same place and time and two people in the world do not have similar handwriting patterns as brains** function differently and our fate is decided by the level of brain functioning.

7. What has been your success rate so far?

Since this whole science is based upon logic and the power of the brain I would say the success rate is tremendously high because on events that I speak I am invariably correct. The variation is one of magnitude only.

8. What is the general profile of your clients?

For obvious reasons, **my clients' identities are subject to confidentiality agreements both written or implied. I do not give out details of my clients for personal and professional gains.** I can tell you that my client base ranges from private individuals and

companies to students. You would be interested to know that teenagers and college students form a reasonable share of my client profile. They engage my services to indicate career path, increase concentration and efficiency.

9. What do I need to give you to have an analysis performed?

I require a half-page sample of cursive handwriting and a signature. The sample should be written without the aid of lined paper (Blank paper). Use only dot pen; no marker, calligraphic pen or pencil.

Original samples enable me to perform more accurate analyses, but you can send your sample by photographing it with a digital camera, scanning it in, faxing it to me.

10. When should I consult a graphologist?

I highly recommend you employ a graphologist **whenever in Business you are about to enter into any type of contract, agreement or partnership involving money, emotional or intellectual risk and personal security. A graphologist is equally essential while advancing loans to individuals and Companies and also while selling on credit to customers-After all you want your money back don't you?**

Handwriting analyses are also a dynamically accurate way of co-coordinating teams and groups, whether for business or pleasure.

You can never be too under prepared for any situation, and I guarantee you will thank yourself in the long run for investing a small sum of money in a service that provides you with a definitive answer

11. Why would I need a handwriting analysis?

Why spend your entire life in second gear when you can use all five gears instead? Graphology is not just a mechanical science that analyses handwriting. It is also a psychological method of determining how one can best use the inherent qualities and nature of a person to perfection.

People spend substantial amounts of money each year on enlightenment workshops in search of their 'inner self' when a handwriting analysis can tell them in five minutes all they need to know! :) **It is also able to develop positive growth drivers within people who are burdened with negative energy. Seriously though, a handwriting analysis uncovers all the unknown and hidden aspects of a personality** and more importantly, provides you with a practical method of applying your talents, intellectual and emotional intelligences and unique personality in your life.

It helps you overcome temporary barriers and enables you to express your true potential.

(Grapho therapy)

12. How Significant is the signature in Graphology?

Signature is a very important tool for a graphologist. **The differentiator of a signature is Sign and nature. In other words your sign reflects your nature.** Many people rely only handwriting and there are many who analyze only signatures I analyze both and it helps me provide a very accurate method of analysis. Choosing between what you analyze signature or handwriting is choosing between mother and the father.

13. Is it legal to request a graphology analysis?

Yes, it is. There is no law in India which prohibits you from having an analysis performed. It is a standard practice for all parties involved to be fully cognizant that their handwriting will be used for evaluation and assessment purposes but in some cases it is not necessary. The United States Supreme Court has held that a person's handwriting is a public document and is not a form of privacy invasion

14. All right I know my drawbacks after I meet you how do I get them over?

Your are referring to Graphotherapy. Yes by making small changes in our writing habits and signatures we can to a very large extent change our habits and thereby also the events that are associated with our present style.

Let us assume that there is a married couple who are extremely stubborn, egoistic and inflexible and very sensitive to criticism. To explain the point further an **analysis of their handwriting will reveal the specific pen strokes that bring about these aspects in the nature. While I ask the couple to practice writing in a fashion that is flexible, compromising, insensitive, the hand tells the brain to accommodate these specific characteristics and slowly the brain changes focus and compatibility is restored.**

This also helps us to live life in a mode of self-awareness and with greater productivity. It works in a somewhat similar way to NLP (neuro-linguistic programming) by helping to create new neural pathways - or, in handwriting terms, more positive habits in the way we represent ourselves symbolically on paper. Positive feedback, via the unconscious mind, can be achieved, as new, helpful habits replace old, unhelpful ones

Once a person changes his handwriting and signature there is a very strong possibility that his life would also change.

I do suggest changes and people have benefited tremendously over the past several years.

15. How long does it take to observe the benefits of Graphotherapy?

The answer is the same as to the question as to how long would it take for me to burn calories in a gym. Coming back to the question **the idea of Graphotherapy is to change the mindset the functioning of the brain the attitude**. The revised and changed signature should be practiced at least for 1000 times after that the changes would definitely show.
